

RiboMarker[®] RNA Fragmentomics Library Kit

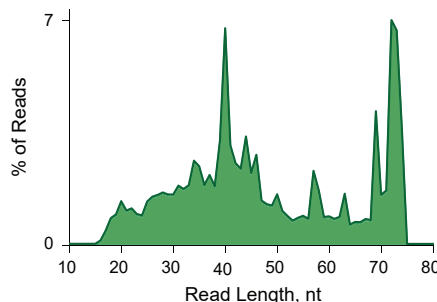

NGS library preparation for all-inclusive RNA detection

- ◆ **Comprehensive Transcript/RNA Fragment Profiling in a Single Reaction:** Captures small RNAs, RNA fragments (including lncRNA, mRNA and tRF/tDR), and detects select RNA modifications.
- ◆ **Universal Sample Sources:** Compatible with a wide range of samples, including biofluids, tissues, and environmental samples.
- ◆ **Sample Quality-Independent:** Effective even with low RIN (RNA Integrity Number) values, ensuring reliable results regardless of sample quality.

All RNA classes revealed using RiboMarker[®] across sample types.

RNA lengths profile from human saliva includes small RNAs and RNA fragments less than 100 nt.

Product	Catalog Number	Size
RiboMarker [®]	400-00012	12 reactions
	400-00048	48 reactions
